PREFACE

The Annual Planning Information (API) report contains an array of information required by the Job Training Partnership Act (JTPA) for the preparation of Service Delivery Area (SDA) Job Training Plans and the analysis of Performance Standards, and day-to-day operation of employment and training programs at the local level. Also included is information required for the Economic Dislocation and Worker Adjustment Assistance Program.

Prepared by the Arizona Department of Economic Security (DES), through the support of the Arizona Job Training Coordinating Council, this API publication is provided to all JTPA SDAs and others in the state to be used in program planning and evaluation, economic analysis and development, resource allocation and funding, job search assistance, job development and placement, employability growth, vocational counseling, and overall program administration.

The method used to generate most of the projections in this publication is based on a "census-share" approach. The 1980 Census serves as base data for race, ethnic, age, and sex breakdowns from which 1980 percentages, or census shares, are calculated and applied to 1989 and 1990 total state or county projections. Of course, the percent distributions that existed in 1980 will not continue throughout the decade; however, we have no other source to use as a base. Although a mid-decade census was conducted in several jurisdictions, the data are not available in the same breakdowns and geographic areas as are needed for JTPA purposes.

Projections to the years 1989 and 1990 refer to program year averages when pertaining to labor force data, but refer to July of the respective years when the data are in relation to population figures.

To the extent practical, all the data contained in this book have been broken down to the SDA level. Efforts are continuing to provide each SDA with as much labor market information as possible. The appendices contain data at the county level.

The Research Administration of DES is ready to assist in the use of this publication. If you have any questions, please contact Barbara Keene at (602) 542-3871.

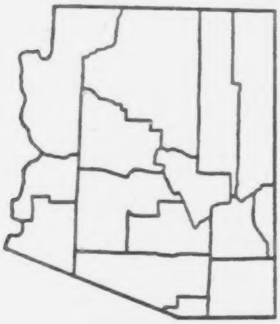
STATE OF ARIZONA



The first half of 1988 saw the moderate pace of growth established in 1987 continue. Over the 12-month period ending August 1988, the state's wage and salary employment grew at a 1.9 percent clip. Over the same period, the unemployment rate climbed as the growth in the labor force outpaced job creation. In August, the state's unemployment rate stood at 6.7 percent, well above the national rate of 5.6 percent.

The construction industry has been the biggest drag on the economy, dropping 6,900 jobs from August 1987 through August 1988. The industry has been contracting since July 1986 as a result of the extensive overbuilding in the commercial and residential multifamily real estate sectors. In addition to the overbuilding, the construction industry has been hurt by the slower inmigration to the state as well as rising interest rates. Therefore, the industry is not expected to turn around until late 1989 at the earliest. Because of industry conditions, openings for jobs such as general laborers, heavy equipment operators, and truck drivers will result from job turnover rather than job creation.

It was anticipated that Arizona's manufacturers would benefit as the value of the dollar dropped on the foreign exchange market and U.S. manufacturing rebounded. Unfortunately, Arizona did not see this benefit before U.S. exports cooled off. Because of this, manufacturing employment has seen only moderate growth over the 12 months ending August 1988. Over this period, manufacturing jobs increased at a 0.4 percent pace. Other negative conditions in the industry have hindered employment growth. The most important of these are the layoffs and pullouts of firms restructuring to maintain a competitive edge. The slow rate of manufacturing growth is expected to continue through 1989 causing openings for assemblers, skilled and semi-skilled workers, and clerical personnel to be in short supply.

As the movement to a service-based economy continues, the trade and services industries will provide the bulk of job opportunities in the future. Business services, hotels and lodging places, health services, and food stores will produce the largest number of job openings over the next two years.

Most job opportunities in Arizona will be located in the urban areas. Currently, the metropolitan areas account for over 80 percent of all wage and salary jobs in the state. Over the last two years, however, employment growth in the nonmetropolitan counties has outpaced the metro areas and this trend is expected to continue through 1989. Despite the more rapid growth, the nonmetropolitan counties will continue to be plagued by high levels of unemployment.

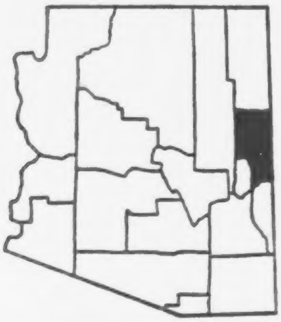
APACHE COUNTY SERVICE DELIVERY AREA



Over the 12-month period ending August 1988, total wage and salary employment decreased, and the unemployment rate dropped. The outlook for this service delivery area calls for continued moderate growth. However, the remoteness of the county inhibits its ability to draw employers to the area. Therefore, the county will remain reliant upon the tourist industry for employment growth.

Previously, the economy of Apache County relied on the lumbering and farming industries. Currently, the primary industries in Apache County are tourism and government. The outlook for tourism is bright as the White Mountain recreation area grows in popularity with both winter sports enthusiasts and summer vacationers who seek relief from the desert heat. In addition to the White Mountains, visitors are also enticed to the county by Canyon De Chelly, the Petrified Forest, and the Painted Desert. The growth in tourism will create increased demand for occupations in the trade and services industries. These occupations include cashiers, clerks, and custodial workers.

Government employment has grown moderately and this trend is expected to continue over the next few years. Openings will be created mainly for clerical personnel and maintenance workers.

The construction industry had experienced healthy growth with the building of two power-generating stations over the last few years. With construction on these plants completed or temporarily on hold, job growth in this industry will be minimal.

Overall, the outlook for the Apache County Service Delivery Area calls for slow to moderate growth over the next two years, but high unemployment will continue to plague the area.

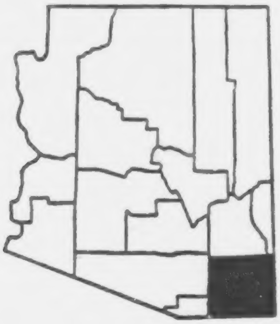
COCHISE COUNTY SERVICE DELIVERY AREA



Wage and salary employment in Cochise County decreased 2.8 percent from August 1987 to August 1988. With the decline in jobs, the unemployment rate rose two-tenths of a percent. Most of the employment decline was seen in manufacturing, trade, and government.

Cochise County has a rather diverse economic base. The primary industries are government, trade, and services. Agriculture also plays an important role in the county.

Government continues to be the dominant employer. As of August 1988, nearly 40 percent of all wage and salary jobs were in government. The largest portion of government jobs are related to Fort Huachuca, but the federal prison near Douglas, and the presence of the U.S. Customs Service, the Bureau of Immigration and Naturalization, and the Border Patrol also boost government employment. However, most job openings in these areas will be the result of turnover rather than job growth.

The agriculture industry continues to play an increasingly important role in the area's economy. The expansion of fruit orchards near Willcox will increase the demand for harvest and packing workers. The growth of the agriculture industry will in turn generate demand for workers in the food processing industries.

Recently, there has been an increase in the number of retail establishments, and more are either planned or under construction. This will bolster the demand for retail clerks and cashiers.

Growth in the government sector will moderate, meaning a larger portion of the openings of these positions will be the result of job turnover instead of new job openings compared to recent years.

Additionally, the success of the Maquiladora or twin manufacturing plants in Mexico and Cochise County paint an encouraging outlook for manufacturing.

While employment fell over the 12 months ending August 1988, the economic outlook for Cochise County remains optimistic. With continued diversification, employment growth will continue to be healthy.

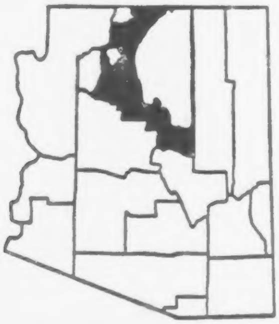
COCONINO COUNTY SERVICE DELIVERY AREA



The Coconino County Service Delivery Area is another of the nonmetropolitan areas with a diverse economic base. Among the more important industries are tourist-related trade and services, government, lumbering, and manufacturing of lumber products. Because the economic base is diverse compared to other nonmetropolitan areas, the service delivery area has a relatively low unemployment rate.

Government is one of the largest employers, accounting for over one-fourth of all jobs. Government employment in Coconino County is dominated by Northern Arizona University, but the Forest Service also has a strong presence. As the government grows, more job openings will be created for clerks, typists, secretaries, and maintenance workers.

Manufacturing, mainly of building products, is related to the construction industry. Therefore, it is likely to be stagnant or see very little growth through 1989. Growth should resume in late 1989 or early 1990. Until growth resumes, most job opportunities will result from job turnover.

The tourist industry plays a major role in the county's economy. This industry should remain healthy over the next two years as both the state and U.S. economies maintain steady growth.

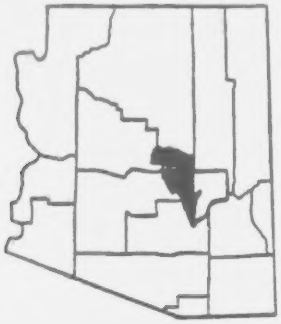
GILA COUNTY PORTION OF THE GILA/PINAL SERVICE DELIVERY AREA



Formerly, the Gila County Service Delivery Area had been dependent upon the mining industry for its economic health. While mining still accounts for an important part of the area's wage and salary employment, it is no longer the sole determinant of the area's economic well-being. Recently, the mining industry has shown signs of improvement--the result of favorable conditions on the world market. However, it is not likely to return to its previously high employment levels. As market conditions should remain steady, copper mining employment is expected to show small gains in the near future.

While mining employment is concentrated in the southern portion of the county, the northern portion plays host to most of the county's tourism. Tourist-related trade and services are an important part of the county's economy. With its cooler climate, northern Gila County attracts many visitors from the metropolitan Phoenix area. Growth of tourism will lead to increased demand for lodging, restaurants, and other trade and service establishments.

Government continues to be a major employer along with trade and services. Most of the jobs available in these industries will be for office clerks, secretaries, and sales personnel. As the population grows, additional demands will be made for teachers, clerical workers, and maintenance personnel.

With major construction projects in the planning stages, construction employment should increase in the near term. Job openings should be created for general laborers, painters, electricians, and heavy equipment operators.

Overall, the areas of Gila County that depend primarily on the tourism-related industries should fare better than other areas. The mining industry will remain healthy as long as market conditions are promising.

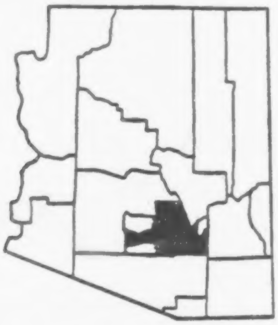
PINAL COUNTY PORTION OF THE GILA/PINAL SERVICE DELIVERY AREA



The Pinal County Service Delivery Area has a more diverse economic base than most of the nonmetropolitan areas. Formerly dependent upon the mining industry, the county now relies on manufacturing, trade, and government, as well. From September 1987 through August 1988, the government and manufacturing sectors showed the largest employment gains.

Government is the largest employer in the county, with the largest source of government employment at the state prison in Florence. Job opportunities exist for corrections officers, clerks, and clerical personnel. Most openings, however, will be the result of separations and turnover rather than new jobs.

Pinal County is one of the state's largest agricultural centers. Nearly one-third of the state's cotton is grown in Pinal County. The county also has large grain and alfalfa crops. The completion of the Central Arizona Project ensures that water will be plentiful for crop production in the future.

Despite its decline since 1981, mining still maintains a large presence in the county. Copper mining employment is expected to be stable as long as market conditions are good.

Manufacturing employment growth has been strong as the county has had good fortune attracting employers. The city of Casa Grande has been particularly successful. The expansion in the manufacturing sector will create openings for clerical personnel and skilled and semiskilled workers.

Growth prospects are good as Pinal County continues to diversify, particularly as the manufacturing industry emerges as a major force in the county's economy.

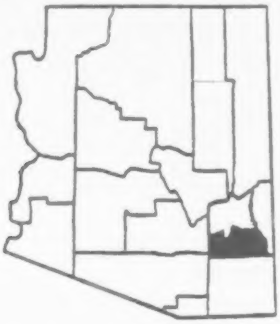
GRAHAM COUNTY SERVICE DELIVERY AREA



The employment base of the Graham County Service Delivery Area is centered around trade and government. Over the 12-month period ending in August 1988, government employment remained level while trade employment increased. Job openings created by the growth of the trade industry include sales clerks, warehouse workers, and cashiers.

While mining is not a major industry in Graham County, it has played a significant role in the county's economic well-being. Many of those employed by the mines in the Clifton-Morenci area reside in Safford and, therefore, spend much of their disposable income in Graham County. This means that the fortunes of the mining industry have a direct impact on the county. With the outlook of the mining industry healthier than it has been in years, the prognosis for Graham County has improved. This should be seen in the growth of the trade and services industries.

While the prospects have improved in recent years, the long-term economic growth of the service delivery area will hinge on its ability to diversify its economic base. The county needs to expand its primary sources of employment beyond trade and government.

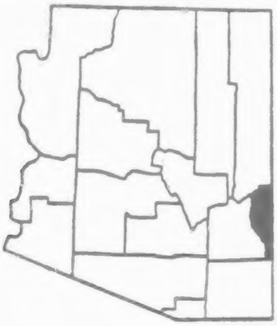
GREENLEE COUNTY SERVICE DELIVERY AREA



The decline of the mining industry in 1982 had a severe impact on Greenlee County's economy. Repercussions of the mining slump are still being felt today. Greenlee County is one of the few areas in the country that has experienced a net out-migration of people in recent years.

Since 1981, mining employment has dropped off by over 1,000. In the first seven months of 1988, mining employment has averaged 1,600. Despite this decline, the mining industry still accounts for over half of Greenlee County's wage and salary employment. Mining is expected to show moderate gains in the near term, creating openings for equipment operators and general laborers.

Government is the county's next largest employer, accounting for approximately 20 percent of total wage and salary employment. Because of the growth pattern in the county, most job openings in this sector will be limited to vacancies created through job turnover.

Greenlee County's growth prospects, like Graham County's, hinge on the ability to diversify its economic base beyond copper mining and government. Tourism is the most likely area for expanding the economic base. A growing tourism industry would create job openings in the trade and services industries.

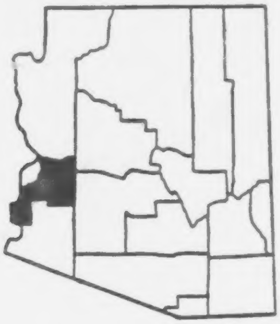
LA PAZ COUNTY PORTION OF THE LA PAZ/MOHAVE SERVICE DELIVERY AREA



Over the 12 months ending in August 1988, wage and salary employment grew at a rapid pace in the La Paz County Service Delivery Area. Most of the growth took place in the tourist-related trade and services industries.

Tourism, the county's key industry, is projected to maintain strong growth through 1990. Tourists are attracted to the county because of its mild winter climate and the opportunity for water recreation on the Colorado River. In the future, jobs openings will be created for clerks, cashiers, hotel clerks, and restaurant workers, among others.

In addition to its tourism base, La Paz County is also developing a light manufacturing base. Growth in this sector will provide job openings for assemblers, material handlers, and maintenance mechanics.

The forecast for the La Paz County Service Delivery Area calls for moderate growth in the near term.

MOHAVE COUNTY PORTION OF THE LA PAZ/MOHAVE SERVICE DELIVERY AREA

The primary economic activities in the Mohave County Service Delivery Area are manufacturing and tourist-related trade and services. Over the 12-month period ending August 1988, manufacturing employment showed healthy gains while trade and services grew at a more moderate pace.

The towns along the Colorado River depend on tourist activity for their economic survival. The town of Laughlin now ranks third among Nevada cities, in terms of gaming revenues. Laughlin's growth has spilled over to Bullhead City, making it the largest city in Mohave County. The continued growth of the gaming industry in the area will create job opportunities for cashiers, food service workers, desk clerks, and other tourist-related occupations.

The strong population growth will spur the demand for such occupations as teachers, clerical workers, and other public service occupations in both Bullhead City and Kingman, the county seat.

The near-term outlook for Mohave County is bright. Growth in employment will be enhanced by the strong tourist activity, population growth, and expansion of the manufacturing industry. The majority of the growth will be provided by tourism.

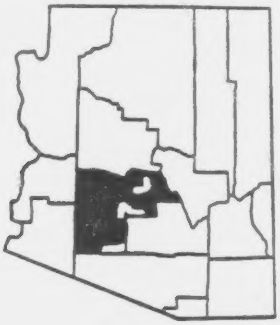
BALANCE OF MARICOPA COUNTY SERVICE DELIVERY AREA



Employment growth in the Maricopa County Service Delivery Area is growing at its slowest rate since 1982, with moderate growth projected to continue into 1990. The weakness in the economy is the result of poor conditions in the construction and finance, insurance, and real estate industries and sluggish manufacturing growth. In general, the service-providing industries gave the economy some momentum while the goods-producing industries restrained growth.

Manufacturing is one of the more important industries in the county. Employment in manufacturing has more than doubled since 1970, although its share of employment has declined. It was anticipated that the manufacturing industry would rebound this year, both locally and for the nation, as exports rebounded with the drop in the value of the dollar. While a resurgence of exports has occurred nationally, surprisingly, Arizona has not seen these benefits. Manufacturing is projected to grow at a slow rate through 1989, slightly under the growth recorded in 1987. Most jobs created in the manufacturing sector will be for assemblers, material handlers, and maintenance mechanics.

The largest employer in the county is the services sector. Growth in this industry has been fueled by the county's rapid population growth in recent years. In 1987, over one-fourth of all jobs were in services. This is a substantial jump from the share it held in 1970. This trend toward services coincides with the national growth pattern. Services employment is anticipated to be the strongest in the county in 1989 and 1990. The largest number of job openings in this sector will be for counter attendants, security guards, and clerical personnel.

Job openings in the construction industry will be sparse through 1990. In 1988, the construction industry is perpetuating the decline which began in the summer of 1986. The industry has been plagued by the overbuilding which occurred through mid-year 1986 and the slowed inmigration to the metropolitan area. In 1989, construction employment is expected to drop slightly. The construction industry is not projected to turn around before some time in 1990. Therefore, job availability in the industry will depend on labor turnover.

Another industry affected by the slump in construction activity is finance, insurance, and real estate (FIRE). FIRE employment is expected to fall by 2.0 percent in 1988. This drop is the result of problems in both the finance and real estate sectors. Real estate activity is expected to rebound when the construction industry picks up. The finance sector is anticipated to resume slow growth in the short term after correcting for its over-expansion after deregulation in 1980.

Despite the weakness in a few industries, the outlook for the balance of Maricopa County calls for moderate growth in the near term. After 1989, stronger growth is expected to resume when the industries which are currently on shaky ground recover.

CITY OF PHOENIX SERVICE DELIVERY AREA

Phoenix enjoyed rapid economic growth in employment during the 1984-1986 period. In 1987, however, employment grew at a more moderate pace. This more temperate rate of economic growth is forecast to continue through 1989.

The economic base of Phoenix is similar to that of the balance of Maricopa County, but as the state capitol and the state's major business center, the city has a high concentration of employment in government and financial services. Government employment is projected to expand at a 4.6 percent pace in 1988 followed by 3.4 percent growth in 1989. This will create ample job opportunities for clerical workers, secretaries, and computer operators. Growth in the financial sector will be slow. Therefore, opportunities for jobs in this area will be the result of labor turnover.

Construction employment will decline through 1989 as developers wait for the backlog of commercial real estate space to be absorbed. Building activity is expected to be revived some time in 1990.

Manufacturing in Phoenix will follow the same pattern as the balance of the county. If the manufacturing export rebound continues to elude the state, growth will be slack through 1989. As the fate of defense spending is revealed under the new presidential administration, the outlook for many of the area's manufacturers will be made clearer. Until then, restrained growth will be the outlook for the industry.

Although employment growth will be moderate compared to the record setting pace of the 1984-1986 period, the diverseness of the Phoenix economy will continue to create a wide variety of employment opportunities over the next two years.

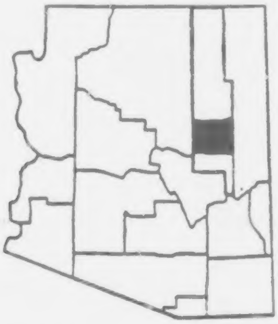
NAVAJO COUNTY SERVICE DELIVERY AREA



The principal industries in the Navajo County Service Delivery Area are government, tourism, and manufacturing. Wage and salary employment grew 8.6 percent over the 12-month period ending August 1988. Manufacturing added 50 new jobs, while government employment fell by 125. The tourist-related trade and services industries added 250 new employees over the same time period.

Most of the manufacturing in Navajo County is related to lumber and wood products. Because of the statewide slump in the construction industry, manufacturing employment has been stagnant. Since the construction industry is not expected to turn around until late 1989, most job openings in lumber and wood products manufacturing will be the result of job turnover.

The southern portion of Navajo County, with its mountains and cool summer climate, receives most of the county's tourism business. As tourism grows, jobs will be created for motel and hotel personnel and restaurant workers.

Navajo County's economy should continue on the same path as it has previously. In the near term, the county will see slow but steady employment growth. The county needs to attract more industry in order to create a stronger economy.

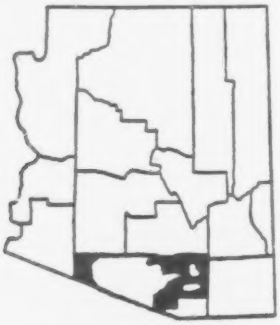
PIMA COUNTY SERVICE DELIVERY AREA



The first eight months of 1988 presented the Pima County Service Delivery Area with some troublesome economic news as major employers announced layoffs and plant closures. With the discouraging news, job growth over the 12-month period ending August 1988 was very slight, although it was a little higher than in the previous 12 months. Also offsetting the negative news of layoffs and closures, some firms have announced plans or interest in relocating to Pima County.

Well into the 1970s, the Pima County economy was dependent upon mining, government, and tourism. Today, tourism has increased in importance, but the roles of mining and government have diminished. Tourism is thriving with the development of first class resorts in the Tucson area. With the addition of these resorts, Tucson is developing a reputation as a convention and recreation center. Tourism-related employment will be most prominent in the trade and services sectors. Employment in these industries is anticipated to grow through 1990.

During the early 1980s, the mining industry suffered from five straight years of employment declines. Mining employment has shown gains in 1987 and through the first half of 1988, and this trend is expected to continue through 1989. Beyond 1989, employment is expected to stabilize. Nonetheless, the industry will not regain the stature it once held in the Pima County economy.

Government, while growing in absolute terms over the years, has seen a reduction in its share of employment. In 1989 and 1990 government is projected to grow moderately, creating job opportunities for clerks, clerical staff, and maintenance personnel.

In line with other areas of the state, construction employment is projected to decline through 1989 in Pima County. In 1990, moderate growth is anticipated as the industry comes out of a three-year slump. Because of the downturn, job openings for general laborers and equipment operators will be the result of job turnover.

The outlook for Pima County is less optimistic than for other areas. Sluggish manufacturing growth, the construction downturn, and slowed population growth will all combine to dampen growth in the near term.

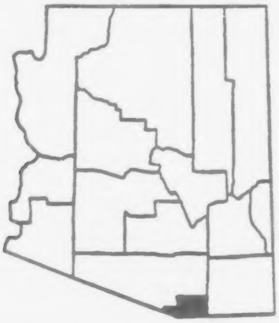
SANTA CRUZ COUNTY SERVICE DELIVERY AREA



Santa Cruz County is the smallest county in the state. Its economic base consists of manufacturing and wholesale and retail trade. Over the 12-month period ending August 1988, total wage and salary employment had increased slightly with the largest gains occurring in the services industry.

Manufacturing plays an important role in the economy because of the large number of twin plants that operate in the county and Mexico. Despite the large number of plants, manufacturing employment has been flat, partly as a result of the peso devaluation and the faltering Mexican economy.

The devaluation of the peso has also hurt the retail trade business in the county by substantially reducing the number of consumers who travel across the border to Nogales or other cities for shopping. Until the Mexican economy strengthens, retail trade opportunities in Santa Cruz County will be limited, causing most openings for sales clerks, stock clerks, and cashiers to be created through labor turnover.

Santa Cruz County is one of the major centers for shipping produce from Mexico to all parts of the United States. Therefore, there are many opportunities for truck drivers and general laborers.

The outlook for Santa Cruz County is good. Its ability to expand the manufacturing base and wholesale trade will determine the future level of employment growth.

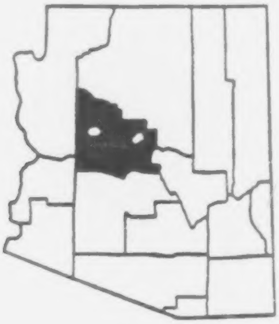
YAVAPAI COUNTY SERVICE DELIVERY AREA



The principal industries in the Yavapai County Service Delivery Area are tourism, manufacturing, and lumbering. Over the 12-month period ending August 1988, total wage and salary employment increased, with most of the growth in the tourist-related trade and services industries. On the down side, manufacturing employment fell.

The primary products of Yavapai County's manufacturing industry are electronics and lumber and wood products. Part of the decline in manufacturing employment has been caused by the downturn in the construction industry which has reduced the demand for building products.

Tourism has been booming in the Prescott and Verde Valley areas. This trend is expected to continue, creating more jobs in hotels, restaurants, retail businesses, and recreation services.

Government is another major employer in the county. A large portion of government employment is made up of Forest Service workers. Most job openings in this field are the result of job turnover rather than job growth.

The economic future of Yavapai County looks strong with the tourism industry expanding. However, future growth will also be determined by the county's ability to diversify further.

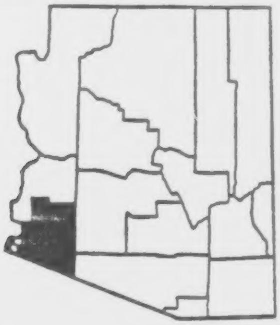
YUMA COUNTY SERVICE DELIVERY AREA



The economic base of the Yuma County Service Delivery Area consists primarily of agriculture, manufacturing, and government. From September 1987 through August 1988 wage and salary employment increased, with gains across the board in all industries, excluding trade which declined.

Employment opportunities in the agriculture industry are seasonal. Agriculture generates job opportunities in picking, packing, warehousing, and shipping. Yuma is a major shipping center for Mexican produce during the winter months. The border trade largely depends on the health of the Mexican economy. If the Mexican economy improves, the prospects for border trade will too.

Manufacturing employment in Yuma County has been growing moderately. Some jobs will be available for technicians and production workers as the manufacturing base grows. Also, the growth in the number of twin plants operating in the area will help to expand manufacturing employment.

Yuma's growing population will lead to a rise in government employment. Most new job openings will be for teachers or maintenance workers in the local schools or community colleges. Yuma County has a sizable government work force with the prison, Marine Corp Air station, U.S. Army Proving Grounds, and Arizona Western College located there.

Yuma County continues to move through the transition from an agricultural-based economy to an economy dependent upon manufacturing, trade, and services. The expansion of tourist-related services and growth in trade will help the local economy provide employment opportunities in the future.

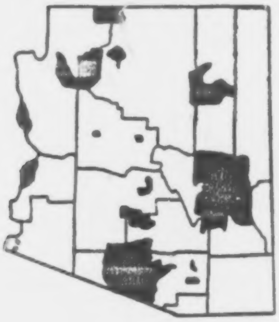
TRIBAL SERVICE DELIVERY AREA



The Tribal Service Delivery Area (Tribal SDA) is comprised of 19 reservations located throughout the state. The Arizona Department of Economic Security serves as Grant Recipient for the Tribal SDA. Eight tribal governments and the Indian Development District of Arizona serve as administrative entities, contracting with the State of Arizona to provide JTPA services on the reservations. The Tribal SDA's Title II-A and II-B allocations are distributed to its administrative entities based on a population formula using current Bureau of Indian Affairs (BIA) data.

The traditional arts and crafts (i.e., silver and turquoise jewelry, pottery, basket or textile weaving, painting) still exist within the Tribal SDA, but they do not portray a true economic picture of the labor force since self-employment opportunities, except for a few well-known crafts persons, are generally seasonal. No significant change is anticipated for this group in the near future.

Construction-related jobs on most reservations have stabilized during the past two years. Home construction and improvement programs through the U.S. Department of Housing and Urban Development, along with BIA-sponsored road improvement and highway construction, will continue to provide limited employment in the building and highway construction trades.

The various social, health, education, and job training programs funded by local, state, and federal governments comprise more than 90 percent of all available employment. Recent federal government budget reductions have resulted in layoffs of employees on most reservations. Simultaneously, the tribal governments have experienced reductions of revenue derived from tribal resources, resulting in additional layoffs.

Lower skill-level positions are saturated and stable. Unfortunately, outside skilled workers have been filling vacancies in some professional, technical, and specialized positions that require degrees and special certificates. Few reservation residents meet these requirements.

There are a limited number of employment opportunities in the private sector, including tribally owned enterprises. There is a tendancy toward turnover in these jobs as employees find more attractive career opportunities. No significant growth in the private sector is anticipated in the near future.

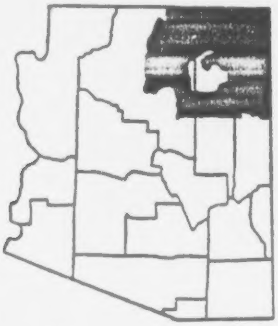
NAVAJO NATION SERVICE DELIVERY AREA



The Arizona Navajo Service Delivery Area, located in the northeastern quadrant of the state, covers approximately 15,664 square miles, or roughly more than 10 million acres. It occupies the major portions of Apache and Navajo counties and approximately a third of Coconino County.

The Navajo Nation is a direct service provider through governmental subunits representing five major geographical regions referred to as agencies. These agencies are subdivided into districts and chapters. The chapters are the local units of government, and combinations of several chapters comprise districts. The Arizona portion of the Navajo Nation is served by four agencies (Tuba City, Chinle, Fort Defiance, and Shiprock). Boundaries of the Shiprock and Fort Defiance Agencies extend into New Mexico, as does Tuba City into Utah. A total of 58 chapters make up the Navajo JTPA Service Delivery Area in Arizona with a population of 99,121. The remaining Navajo Nation resident population of 70,034 are located in Utah and New Mexico.

The Navajo Nation's current goal is to develop the private sector. Progress has been slow for commercial and industrial development. In reaching for this goal, some of the strategies include: 1) the development of tribal enterprises to promote Navajo small business development, 2) the development of Navajo financial institutions, 3) the promotion of tourism, and 4) energy development. These strategies are intended to build up the private sector, increase opportunities for Navajo entrepreneurs, and to create employment opportunities for the Navajo people.

Currently, the three occupational sectors that cumulatively comprise over 70 percent of workers on the Navajo reservation are: 1) government, 2) services, and 3) mining. The combination of extraction coal mining and construction will remain stable as the Navajo Tribe is mostly an exporter of tribal natural resources.

The goal of the Navajo JTPA program is to provide Navajo people with training opportunities and employment experience that are consistent with local labor market demands. In addition to preparing them for employment opportunities that are anticipated to become available, the Navajo Department of Employment and Training must assure that the Navajo people are prepared to take advantage of these opportunities.

The goal of the Navajo Nation Service Delivery Area is to promote maximum use of training and retraining resources to prepare the reservation work force and strengthen the Navajo economy by improving the skills of the labor force to meet the demand of the public and private sector entities. The Navajo Department of Employment and Training recognizes the characteristics of the Service Delivery Area, and an emphasis will be placed upon appropriate job training directed at growth occupations and/or labor market demands.

APPENDIX OF MISCELLANEOUS TABLES

TABLE 1

POVERTY INCOME GUIDELINES
EFFECTIVE FEBRUARY 12, 1988

FAMILY SIZE	POVERTY GUIDELINES
1	$ 5,770
2	7,730
3	9,690
4	11,650
5	13,610
6	15,570
7	17,530
8	19,490

For each additional family member add $1,960.

SOURCE: U.S. Department of Health and Human Services, February 1988.

LOWER LIVING STANDARD INCOME LEVEL
(70 PERCENT LLSIL)
EFFECTIVE MAY 31, 1988

FAMILY SIZE	METROPOLITAN INCOME	NONMETROPOLITAN INCOME
1	$ -NA-	$ -NA-
2	8,170	8,140
3	11,220	11,180
4	13,850	13,800
5	16,340	16,280
6	19,110	19,040
For each additional person add	$ 2,770	$ 2,760

NOTE: These figures are only for the purpose of determining eligibility for JTPA programs and should not be used for any other statistical purposes. Since the Bureau of Labor Statistics has not revised the lower living family budget (on which the LLSIL is based) since 1981, ETA used consumer price index changes to update the LLSIL to meet JTPA requirements.

SOURCE: U.S. Department of Labor, Employment and Training Administration, May 1988.

Navajo Nation SDA	6,799	19,086	55.36	x .40 + 40	62.14
UNITED STATES	5,417,178	23,625,720			

The adjustment factor is calculated by dividing the ratio of the local economically disadvantaged youth to adults by the national ratio (22.93 percent) and substracting 1 from the result.

((Local ED Youth/Local ED Adults)/.2293) - 1 * 100 = Adjustment Factor

The adjustment factor represents the difference between the youth/adult makeup of the economically disadvantaged population in the local SDA and the national youth/adult composition.

GLOSSARY OF TERMS AND CONCEPTS

Aid to Families with Dependent Children (AFDC)
Provides financial assistance to children deprived of support or care due to death, divorce, absence, or disability of one or both parents. It also provides for rehabilitation and job placement for children and parents through the Work Incentive Program (WIN) and referral to Vocational Rehabilitation or to Job Service, and for children and/or family services.

Arizona Job Training Coordinating Council (AJTCC)
A 30-member council which advises the Governor on the operation of JTPA programs within the state.

Civilian Labor Force
All persons, 16 years of age and over, who are not in institutions nor in the Armed Forces and are either "employed" or "unemployed."

Confidentiality Rules for Unemployment Insurance Data
Data cannot be released without written consent if one of the following is true:

1) There are fewer than three firms in an industry.
2) If there are three or more firms and one firm accounts for 80 percent or more of the employment in that industry.

Current Employment Statistics (CES) Survey
A cooperative effort between Arizona and the United States Bureau of Labor Statistics which produces monthly estimates of employment, hours, and earnings information.

Dislocated Worker
An individual who 1) has been laid off or has received a notice of layoff, is eligible for or has exhausted unemployment compensation, and is unlikely to return to the previous industry or occupation; 2) has been laid off or has received a notice of layoff as a result of a permanent closure of or substantial layoff at a plant or facility; 3) is long-term unemployed and has limited opportunities for employment in the same or similar occupation in the area where the individual resides, including an older individual with substantial barriers to employment by reason of age; or 4) was self-employed (including farmers and ranchers) and is unemployed as a result of general economic conditions in the community or natural disasters.

Displaced Homemaker
A person who was a full-time homemaker for a substantial number of years and derived the substantial share of his/her income from: A) a spouse and no longer receives such support due to death, divorce, permanent disability of or permanent separation from the spouse; or B) public assistance on account of dependents in the home and no longer receives such support.

Dropout
An individual who is neither attending school nor subject to a compul-

sory attendance law and has not received a secondary school diploma or a certificate from a program of equivalency for such a diploma.

Econometric Model
A system of mathematical equations used to forecast economic conditions and to investigate alternative economic scenarios.

Economically Disadvantaged
For JTPA purposes, an individual who is a member of a family which receives public assistance or whose family income, for the six-month period prior to application, does not exceed the higher of either the poverty level as determined by the Office of Management and Budget or 70 percent of the Lower Living Standard Income Level (LLSIL). Data obtained from the 1980 Census refer only to the poverty level.

Employed
Individuals, 16 years of age and older, who work as paid employees, are self-employed, or work 15 or more hours as unpaid workers in a family business. Also included are those who are temporarily absent from jobs or businesses due to illness, bad weather, vacations, labor disputes, or personal reasons.

Food Stamp Program
Provides low-income households with increased food purchasing power to enable them to obtain a more adequate nutritional diet through a federal program regulated by the U.S. Department of Agriculture. DES administers the distribution of food stamp coupons that may be exchanged in normal retail grocery outlets for food items.

General Assistance
Provides financial aid to persons who are unemployable because of a temporary physical or mental disability; persons permanently disabled, but not receiving Supplemental Security Income benefits; persons required in the home to care for a disabled relative; and families with foster children, age 18-21, continuing their education.

Health Condition
A physical or mental problem which has lasted for six months or more.

Industry
A distinct group of productive or profit-making enterprises, such as manufacturing, retail trade, or services. Industries or industrial groups used here are defined in the Standard Industrial Classification Manual 1972 of the U.S. Office of Management and Budget.

Job Training Partnership Act (JTPA)
A federal act, passed in 1982, designed to establish programs to prepare youth and unskilled adults for entry into the labor force and to provide job training for economically disadvantaged individuals and others suffering serious barriers to employment.

Labor Market Area
An economically integrated geographic area within which individuals can reside and find employment within a reasonable distance or can readily change employment without changing their place of residence.

Native American Reservations
Geographic areas with boundaries established by treaty, statute, and/or executive or court order, reserved for use by Native Americans.

Nonservice-Connected Disability Pension
Paid to veterans of wartime service who are permanently and totally disabled due to nonservice-connected disabilities or are age 65 or older and whose incomes fall below certain qualifying levels. More than half of those veterans receiving nonservice-connected disability pensions are 65 or older.

Not in the Labor Force
Persons, 16 years old and over, who are not employed and not seeking employment or are unable or unavailable to work regardless of the reason, such as homemakers, students, retirees, disabled persons, or institutionalized persons.

Occupation
An activity which serves as one's regular source of livelihood, such as welding, mechanical engineering, or elementary school teaching.

Population
The number of inhabitants in an area.

Private Industry Council (PIC)
A group of individuals, within each JTPA SDA, representing private business, organized labor, educational agencies, rehabilitation agencies, community-based organizations, economic development agencies, and the public employment service. Their major duties are to provide policy guidance for JTPA activities and the oversight of those activities. A PIC may also provide direct services.

Research Administration
Established in April 1984 within the Arizona Department of Economic Security to consolidate Labor Market Information, Unemployment Insurance Research, and the Arizona State Occupational Information Coordinating Committee.

Service-Connected Disability Compensation
Indemnifies veterans for the loss of earning capacity caused by disease or injury which was incurred or aggravated during military service.

Service Delivery Area (SDA)
A designated area within Arizona which receives JTPA funds based upon a formula and uses those funds to establish employment and training programs.

Supplemental Payments Program (SPP)
Provides payments to eligible aged, blind, or disabled persons who qualify for nursing home care or licensed supervisory home care. The recipient must be receiving Supplemental Security Income (SSI) or precluded from receiving SSI solely because he resides in a public nursing home. The SPP (a state program) data do not include any SSI (a federal program) payment data.

Unemployed
Individuals, 16 years of age and older, who are not working, but are looking for work and are available to work. Looking for work requires specific efforts such as sending resumes or canvassing employers. Discouraged workers (those who have given up looking for work because they feel there are no jobs available) are not counted as unemployed.

Unemployment Rate
Percent of the labor force that is unemployed. It is calculated by dividing the number unemployed by the labor force, and multiplying the result by 100.

Work Disability
A health condition which limits the kind or amount of work or prevents working at a job or business.

ACKNOWLEDGEMENTS AND CONTACT PERSONS

The completion of this publication would not have been possible without the assistance and cooperation of several individuals and government agencies. We wish to thank them for their help. In addition, the names and phone numbers of contact persons are listed.
